

Section 5. Golden Response QC

AutoQC Healthcare v6.6 | revised 06/02/2026 (supersedes v6.5, v6.4, v6.3, v6.2, v6.1, v6.0, v5.1)

Writer Edition (run in claude.ai before RL Studio upload)

AUTORUN. When the writer uploads this file together with the deliverable to a claude.ai conversation, begin running the checklist immediately without waiting for any further prompt from the user. Follow the How to run block below.

This file holds 34 numbered QC checks for Section 5 (Golden Response). Each check has a Severity, a Description, Pass criteria, Fail criteria, and a QA verdict row. This file is the writer edition of the AutoQC, run in claude.ai. The writer uploads it together with the deliverable; Claude runs the checklist and returns the AutoQC report in chat plus a completed copy of this file (.docx) as the writer's archival record. The in chat report defined in the How to run block is the canonical AutoQC summary; the .docx is a convenience for the writer.

How to run this QC

Begin running this checklist now. You are a senior clinical QC reviewer for Project Sanctum. This file is the writer edition of the AutoQC, run in claude.ai. When the writer uploads this file together with the deliverable, run the QC immediately, without waiting for any further instruction from the user. The message 'run the autoqc', any other message, or no message at all is sufficient to trigger the run.

Read the artifact in full, then work through every numbered check in order, comparing the artifact against the Pass and Fail criteria and applying the Verdict conventions.

When every check has a verdict, return BOTH outputs. First, an AutoQC report in chat using the format below; this is the canonical AutoQC summary. Second, a completed copy of this checklist as a .docx with the QA verdict row filled in for every numbered check and the Reviewer summary completed; this is the writer's archival record.

AutoQC report format (use these exact section headers, in this order):

- **AutoQC Report - Section 5 Golden Response** (with artifact name and date on the next line)
- **Overall outcome:** PASS or SEND BACK
- **Failing checks (severity ordered):** Blockers first, then Majors, then Minors. Each entry has the check number, a one line finding, and a concrete action plan for the writer.
- **N/A verdicts:** check number and the reason. Cite the Common N/A patterns block when applicable; outside that list, write a one line structural inapplicability justification.
- **Pass verdicts:** comma separated list of the check numbers that passed. This closes the audit so every numbered check is accounted for.
- **Reviewer summary:** every field from the Reviewer summary block, completed.

This section runs per task, not for the world as a whole. Run the full checklist once for each task and return one report per task with the task name in the header line.

What to upload with this file

What the writer uploads with this file:

- the golden response under review
- its task prompt
- the world files (as a zip or individually)
- task-level files (if any)
- the approved world spec (.docx)

The QC cannot be run without the deliverable.

Time estimate. 45 to 75 minutes for all tasks (10 to 15 minutes per task)

Dependencies. World spec approved, world files generated, prompt finalized.

Prior section sign-off

Before starting, confirm the prior deliverable has been signed off: **the task prompt** must have passed AutoQC (**Section 4 (Task Prompts)**). Record that sign-off in the Reviewer summary. Do not QC this section against an upstream artifact that has not been approved.

Verdict conventions

PASS. The check is affirmatively satisfied. The artifact supplies the information the check needs and that information meets the pass criteria.

FAIL. The pass criteria are not met. This includes the case where the artifact omits information the check requires. Absence of a stated contradiction is not a pass. If a check cannot be confirmed because the artifact does not contain the necessary content, the verdict is FAIL and the writer must supply the content.

N/A. Used only when a check is structurally inapplicable to this world type. N/A is never used because a reviewer could not evaluate a check or lacked a reference; that situation is a FAIL, or is resolved before QC begins.

Hard rule checks. The source traceability and trap coverage checks are hard rules and admit only PASS or FAIL. Pass with flag is not a valid verdict on any check. A live policy question is resolved by the Team Lead before QC, not during it.

Verification. Any check that depends on another document or sheet must cite, in its note, the specific row, file, or passage it was verified against, or confirm its absence.

Linked checks. Where several checks fail from one root cause, cite the cause once in the Reviewer summary rather than repeating it in every note.

What this QC does not verify

This checklist verifies structure, internal consistency, and policy formatting. It does not, and cannot, verify the three things below. A clean pass does not establish them.

Authorship. It cannot confirm a deliverable was written by the writer rather than by an AI. The writer and the Team Lead own that.

Genuine difficulty. Whether a task actually elicits model failure is established by trajectory runs after RL Studio upload, not by this static review.

Deep clinical validity. Whether a trap is genuinely misleading, realistic for the specialty, and correctly calibrated is a judgment only the writer and a domain reviewer can make.

A clean AutoQC pass means the deliverable is well formed, not that it is good.

Common N/A patterns

N/A is reserved for checks structurally inapplicable to this world type, never for checks the reviewer cannot or did not evaluate. The patterns below are the ones legitimately N/A in this section; verdicts of N/A outside this list require a written justification in the note.

Calculation arithmetic and units checks (goldens without calculations); inline source citations (goldens where citation does not aid the grader); time to produce note (if not part of your workflow).

Outcome and tally

Pass rule: every numbered check must verdict PASS or N/A (legitimately, per the Common N/A patterns above) for the deliverable to pass. Any single FAIL, at any severity, means the deliverable does not pass and must be revised. Severity orders the urgency of the fixes; it does not relax the rule.

PASS. Every numbered check is PASS or legitimately N/A. The deliverable advances.

SEND BACK. Any numbered check is FAIL. The deliverable is returned with the in chat summary and the completed checklist; each failing check requires a concrete action plan from the writer before resubmission.

Per task. Each task receives its own outcome. The section advances only when every task's checklist reaches PASS.

Reviewer summary (complete after all checks)

Artifact reviewed:

Reviewer (writer name) and date:

Task:

Prior section sign-off confirmed:

All numbered checks PASS or legitimately N/A (yes / no):

Overall outcome (PASS / SEND BACK):

Verdict counts: PASS ____ / FAIL ____ / N/A ____

Failing Blockers:

Failing Major checks:

Failing Minor checks:

Action plans (one per failing check):

5.1 Golden Includes Everything Requested

Severity	Major
Description	Everything specified in the prompt is present in the Golden Answer.
Pass criteria	Every item explicitly requested by the prompt or by world documents cited in the prompt is present in the Golden Answer.
Fail criteria	Golden Answer omits an item explicitly requested by the prompt.
QA verdict	Verdict (pass / fail / N/A): Note:

5.2 Golden Does Not Include Unrequested Content

Severity	Minor
Description	Golden Answer does not include substantive content beyond what was requested, unless it is standard practice.
Pass criteria	Anything in the Golden Answer beyond explicit prompt requests is standard professional practice (e.g., a brief safety caveat in a clinical note, standard formatting conventions).
Fail criteria	Golden Answer includes substantive content not requested and not standard practice.
QA verdict	Verdict (pass / fail / N/A): Note:

5.3 Coded Values Correct in Golden

Severity	Major
----------	--------------

Description	Coded values declared as in scope are used correctly in the Golden Answer.
Pass criteria	Coded values declared as in scope for this world (commonly ICD-10, CPT, RxNorm; SNOMED and LOINC where applicable) are used correctly and consistently.
Fail criteria	Misused coded values in the Golden Answer.
QA verdict	Verdict (pass / fail / N/A): Note:

5.4 Cross-References Accurate in Golden

Severity	Major
Description	Section numbers, attachments, and citations referenced in the Golden Answer are accurate.
Pass criteria	Every section number, attachment reference, regulatory citation, or document cross reference in the Golden Answer is accurate.
Fail criteria	Wrong section numbers, missing or wrong citations, or inaccurate cross references in the Golden Answer.
QA verdict	Verdict (pass / fail / N/A): Note:

5.5 No Hallucinations in Golden

Severity	Blocker
Description	Golden Answer contains no hallucinated findings, parties, or values.
Pass criteria	Every finding, party (provider, organization, payer), and value in the Golden Answer is traceable to a world file.
Fail criteria	Golden Answer contains hallucinated findings, parties, or values not present in any world file.
QA verdict	Verdict (pass / fail / N/A): Note:

5.6 Professional Tone and Structure

Severity	Minor
Description	Golden Answer reads as a professional healthcare deliverable consistent with the task.
Pass criteria	Tone, register, and structure of the Golden Answer match what a board certified clinician or healthcare operator would produce for the deliverable type.

Fail criteria	Unprofessional tone or structure in the Golden Answer.
QA verdict	Verdict (pass / fail / N/A): Note:

5.7 Clinical Precision

Severity	Major
Description	Recommendations are evidence based and dosed for the patient.
Pass criteria	Recommendations are evidence based. Drug doses are correct for the patient's renal function, weight, and clinical context. Guideline citations include source and publication year where applicable. Defensible recommendations are stated without unnecessary hedging.
Fail criteria	Recommendations are unmoored from evidence, doses ignore patient parameters, citations lack source or year, or hedging appears where definitive language is required.
QA verdict	Verdict (pass / fail / N/A): Note:

5.8 Calculation Arithmetic Verifiable

Severity	Major
Description	Calculations in the Golden Answer are arithmetically verifiable step by step. Mark thumb down with reviewer note 'N/A' if the Golden contains no calculations.
Pass criteria	Every calculation in the Golden Answer (dosing, BMI, eGFR, billing amounts, regulatory thresholds, time intervals) reconciles step by step.
Fail criteria	Calculations in the Golden Answer do not reconcile.
QA verdict	Verdict (pass / fail / N/A): Note:

5.9 Rounding Conventions Specified

Severity	Minor
Description	Rounding conventions for numerical values are specified. Mark thumb down with reviewer note 'N/A' if the Golden contains no calculations.

Pass criteria	Rounding conventions are specified explicitly (in the prompt or grader guidelines) and the Golden Answer follows them consistently.
Fail criteria	Rounding conventions are unstated or inconsistent in the Golden Answer.
QA verdict	Verdict (pass / fail / N/A): Note:

5.10 Source Figures Traceable to World

Severity	Blocker
Description	Source figures used in calculations trace to specific world files. Mark thumb down with reviewer note 'N/A' if the Golden contains no calculations.
Pass criteria	Every source figure in the Golden Answer's calculations traces to a specific world file.
Fail criteria	Source figures in the Golden Answer cannot be traced to any world file.
QA verdict	Verdict (pass / fail / N/A): Note:

5.11 Units Specified Consistently

Severity	Major
Description	Units are specified throughout the Golden Answer for unit bearing values. Mark thumb down with reviewer note 'N/A' if the Golden contains no unit bearing values.
Pass criteria	Every unit bearing value in the Golden Answer carries its unit, and units are consistent within and across calculations.
Fail criteria	Units are missing or inconsistent in the Golden Answer.
QA verdict	Verdict (pass / fail / N/A): Note:

5.12 Appropriate Scope

Severity	Major
Description	Output matches format, length, and intended audience the prompt implies.
Pass criteria	Scope matches what a senior clinician would actually produce for this task type. A wound care SOAP does not become a full systems review. A physician facing discharge summary reads differently than a patient facing summary.

Fail criteria	Scope is materially over or under sized relative to what a senior clinician would produce for the task.
QA verdict	Verdict (pass / fail / N/A): Note:

5.13 Traceable to Source Documents

Severity	Blocker
Description	Every clinical detail in the Golden Response can be traced to a specific source document.
Pass criteria	Every clinical detail (lab values, medication doses, exam findings, clinical decisions) traces to a specific source document in the file set.
Fail criteria	One or more clinical details cannot be traced to any source document.
QA verdict	Verdict (pass / fail / N/A): Note:

5.14 No Fabricated Provider Names, Organizations, or NPIs

Severity	Blocker
Description	Golden does not invent provider names, organizations, NPIs, license numbers, or institutional identifiers.
Pass criteria	Every provider name, organization, NPI, license number, and institutional identifier in the Golden traces to a world file or is documented as project standard (e.g., 'MABEM Medical Center' is acceptable). No invented specific identifiers.
Fail criteria	Golden contains a fabricated provider name, organization, NPI, license number, or institutional identifier.
QA verdict	Verdict (pass / fail / N/A): Note:

5.15 Source-of-Truth Hierarchy Applied

Severity	Major
Description	Golden correctly applies the documented source of truth hierarchy when sources conflict.
Pass criteria	When two or more world sources disagree, the Golden resolves the conflict using the documented hierarchy (e.g., attending decision > specialist consult > progress note > transfer note > patient or family report > EMR active orders).

Fail criteria	Golden picks a non authoritative source over an authoritative one without explanation, or fails to recognize a hierarchy conflict.
QA verdict	Verdict (pass / fail / N/A): Note:

5.16 Cross-Source Reconciliation Traceable

Severity	Major
Description	Where the Golden reconciles across sources, every cited source is identifiable.
Pass criteria	Where the Golden reconciles disagreements across sources, each source referenced is identifiable in the world file set (named by document type, date, or author).
Fail criteria	Reconciliation language in the Golden references sources that cannot be identified in the world file set.
QA verdict	Verdict (pass / fail / N/A): Note:

5.17 No Hyphens or Em/En Dashes in Golden

Severity	Minor
Description	The Golden uses plain hyphens, commas, colons, periods, or restructured prose in place of em dashes, en dashes, and arrows.
Pass criteria	The Golden response contains no em dashes, no en dashes, and no arrow characters as stylistic markers. Plain hyphens are acceptable. The 5/23 doc explicitly permits plain hyphens, colons, or restructured prose.
Fail criteria	The Golden response contains em dashes, en dashes, or arrow characters as stylistic markers. Plain hyphens are not a failure.
QA verdict	Verdict (pass / fail / N/A): Note:

5.18 No Asterisks in Golden

Severity	Minor
Description	Golden contains no asterisks anywhere.
Pass criteria	Golden contains no asterisks of any kind (no emphasis asterisks, no markdown bold or italic markers, no bullet asterisks).
Fail criteria	One or more asterisks appear in the Golden.
QA verdict	Verdict (pass / fail / N/A): Note:

5.19 No AI Prose Tells in Golden

Severity	Minor
Description	Golden avoids AI prose tells.
Pass criteria	Golden does not use AI tell words and constructions such as 'subsequently,' 'ultimately,' 'it is important to note,' 'in conclusion,' or other phrases characteristic of LLM output.
Fail criteria	Golden contains AI prose tells that undermine clinical realism.
QA verdict	Verdict (pass / fail / N/A): Note:

5.20 Placeholders Over Fabrication

Severity	Major
Description	When source documents do not contain information needed for an element of the response, the Golden uses an explicit placeholder, not a fabricated value.
Pass criteria	Where world files do not support a specific finding, the Golden uses an explicit placeholder (e.g., '[No documented baseline weight available]') or acknowledges the gap. No fabricated plausible value.
Fail criteria	Golden fabricates a plausible value where source documents do not contain the information.
QA verdict	Verdict (pass / fail / N/A): Note:

5.21 Golden Consistent with Grader Guidelines

Severity	Major
Description	Golden would receive full marks under its own grader guidelines.
Pass criteria	Walking the grader line by line against the Golden, the Golden does not lose points under any Section A non negotiable or Section C common failure mode. Any Section B variation rule that matters is satisfied.
Fail criteria	Golden would not receive full marks under its own grader guidelines, indicating misalignment between Golden and grader.
QA verdict	Verdict (pass / fail / N/A): Note:

5.22 Golden Length Appropriate to Deliverable

Severity	Minor
Description	Golden length matches what a senior clinician would produce.
Pass criteria	Golden length matches the deliverable: a chart med rec is roughly one page, a discharge summary is 1 to 2 pages, a telehealth check in is 1 to 1.5 pages. Golden is not materially longer than authentic work.
Fail criteria	Golden is materially longer or shorter than what a senior clinician would produce.
QA verdict	Verdict (pass / fail / N/A): Note:

5.23 Golden Filename Follows Convention

Severity	Minor
Description	Golden filename follows project naming convention.
Pass criteria	Golden filename follows the project convention (e.g., 'Golden_Task_[N]_[Workflow_Name]') and matches what the grader Reference line names.
Fail criteria	Golden filename does not follow project convention or does not match the grader Reference line.
QA verdict	Verdict (pass / fail / N/A): Note:

5.24 Golden File Format Matches Deliverable

Severity	Minor
Description	Golden file format matches what the deliverable would be in real practice.
Pass criteria	Golden is saved as .docx for chart notes, summaries, letters, and clinical documents. Tables or structured deliverables may use .xlsx where appropriate.
Fail criteria	Golden is saved in a format that does not match real practice for the deliverable type.
QA verdict	Verdict (pass / fail / N/A): Note:

5.25 Golden Author Appropriate to Task

Severity	Minor
Description	Golden is signed by a named author whose role fits the task.

Pass criteria	Golden ends with a signature block naming an author whose role and credentials match what the task would actually generate.
Fail criteria	Golden is unsigned or signed by an author whose role does not fit the task.
QA verdict	Verdict (pass / fail / N/A): Note:

5.26 Golden Date Matches Task Anchor

Severity	Major
Description	Golden signature date matches the task anchor date.
Pass criteria	Golden signature date matches the task's temporal anchor.
Fail criteria	Golden signature date does not match the task anchor.
QA verdict	Verdict (pass / fail / N/A): Note:

5.27 Golden Patient Identity Matches World

Severity	Major
Description	Patient identifiers in the golden match the world.
Pass criteria	Patient name, DOB, MRN, allergies, age, and sex in the golden match the world spec's Patient Profile section exactly.
Fail criteria	Golden patient identifiers do not match the world spec.
QA verdict	Verdict (pass / fail / N/A): Note:

5.28 No AI Self-References in Golden

Severity	Minor
Description	Golden contains no AI self references.
Pass criteria	Golden contains no phrases like 'As an AI,' 'I am a language model,' 'Based on my training,' or any other AI self reference.
Fail criteria	Golden contains AI self references.
QA verdict	Verdict (pass / fail / N/A): Note:

5.29 No Internal Review Notes in Golden

Severity	Minor
Description	Golden contains no internal review notes, builder comments, or out of world annotations.

Pass criteria	Golden contains no '[TODO]', '[review this]', '[double check]', or other internal annotations.
Fail criteria	Golden contains internal review notes or builder annotations.
QA verdict	Verdict (pass / fail / N/A): Note:

5.30 No Tracked Changes or Comments in Golden

Severity	Minor
Description	Golden file has no tracked changes and no comments.
Pass criteria	Golden .docx contains no tracked changes and no comments.
Fail criteria	Golden contains tracked changes or comments.
QA verdict	Verdict (pass / fail / N/A): Note:

5.31 Clinical Register Appropriate

Severity	Minor
Description	Golden uses register appropriate to the deliverable.
Pass criteria	Golden uses physician shorthand, abbreviations, and structured layout where the deliverable is physician facing. Uses lay register where the deliverable is patient or family facing.
Fail criteria	Golden uses inappropriate register for the deliverable audience.
QA verdict	Verdict (pass / fail / N/A): Note:

5.32 Golden Addresses Prompt in Order

Severity	Minor
Description	Golden addresses prompt requirements in the order requested.
Pass criteria	Where the prompt requests multiple items, the golden addresses them in the order requested.
Fail criteria	Golden addresses prompt requirements out of order without clear reason.
QA verdict	Verdict (pass / fail / N/A): Note:

5.33 Golden Catches the Designed Traps

Severity	Blocker
----------	----------------

Description	Golden demonstrates catching each designed trap the deliverable would expose.
Pass criteria	For each trap a successful agent must catch to produce the correct deliverable, the golden demonstrates the catch.
Fail criteria	Golden fails to demonstrate catching one or more designed traps.
QA verdict	Verdict (pass / fail / N/A): Note:

5.34 Golden Cites Sources Inline Where Helpful

Severity	Minor
Description	Golden cites source documents inline where citation aids the grader.
Pass criteria	Where reasoning depends on a specific source document, the golden notes the source briefly inline. Citations are sparse and clinical, not academic.
Fail criteria	Golden makes claims that depend on specific source documents without citation.
QA verdict	Verdict (pass / fail / N/A): Note:
