MEDICATIONS

Pt brought his discharge med list from the hospital - it's in the chart. Daughter says "they changed a bunch of his meds while he was in there"

TRIAGE NOTES

74 yo M here w/ daughter. Rt leg pain x 2 days, getting worse. Says his knee is swollen and stiff. Has a scrape on his R shin that daughter says is looking redder and "spreading." Also says his calf has been sore. Fever started at home yesterday - took some Tylenol but didn't help much. Walking with a limp, daughter helping him.

Daughter says he was at Haven Community Med Ctr about 2 wks ago - was there "a long time." Had some kind of stomach bleed and ended up in the ICU, "they had to do a procedure on his stomach." Also had something with his heart. She's not sure about all the details, says it was "a lot."

Pt says his knee "acts up sometimes" - has had it checked before for gout. But says this feels different, more swollen than usual and the fever is new.

Has been mostly sitting around since getting home - "he barely gets out of his recliner" per daughter. Not eating great. Taking his meds "mostly."
