

# THISTLEWOOD MEMORIAL HOSPITAL

Emergency Department

802 Quillberry Drive | Thistlewood, VA 22102 | (571) 555-0233

## DIAGNOSTIC IMAGING REPORT

### PATIENT

Pemberton, Harold J. DOB: 04/12/1951 (74M) MRN: 847-29-3156

### ALLERGIES

Sulfa drugs (rash)

### ORDERING PROVIDER

Dr. G. Frobisher, Emergency Medicine

### DATE / TIME

03/26/2026 14:22

### EXAMINATION

XR Right Shoulder, 3 views (AP, lateral, axillary)

### CLINICAL INDICATION

74-year-old male, fall onto right shoulder at work. Pain, limited range of motion. Rule out fracture.

### TECHNIQUE

Three standard views of the right shoulder obtained.

### FINDINGS

Mildly displaced fracture of the right proximal humerus involving the surgical neck. The fracture line extends from the surgical neck with approximately 5 mm of displacement and mild valgus angulation. The greater tuberosity is intact. No dislocation of the glenohumeral joint. The acromion, clavicle, and scapula are unremarkable. Mild degenerative changes of the acromioclavicular joint noted incidentally. Soft tissue swelling overlying the proximal humerus.

### IMPRESSION

- Mildly displaced fracture of the right proximal humeral surgical neck with valgus angulation.
- No glenohumeral dislocation.
- Incidental mild AC joint degenerative changes.

### RECOMMENDATION

Orthopedic consultation recommended for fracture management. Sling immobilization in the interim.
