ECHOCARDIOGRAM REPORT

Patient: Marcus D. Whitfield MRN: PED-2025-04471

DOB: 03/03/2016 Age: 9 years

Date of Study: 02/05/2026

Ordering Provider: Anita Sharma, MD Indication: Hypotension on ED visit 01/22/2026

TECHNIQUE

Complete transthoracic echocardiogram with 2D imaging, M-mode, color flow Doppler, and spectral Doppler performed per standard pediatric protocol.

FINDINGS

Chambers: Normal cardiac chamber sizes for age and body surface area. No chamber dilation. No ventricular hypertrophy.

Valves: All four cardiac valves appear structurally normal. No stenosis or regurgitation by Doppler. Mitral valve leaflets are thin and mobile.

Ventricular Function: Left ventricular systolic function is normal. Ejection fraction estimated at 62% by Simpson's biplane method (normal > 55%). No regional wall motion abnormalities. Right ventricular function is normal by qualitative assessment.

Great Vessels: Normal aortic root dimension. No coarctation identified. Main pulmonary artery normal in caliber.

Pericardium: No pericardial effusion.

Other: No intracardiac mass. No thrombus. Atrial septum appears intact.

IMPRESSION

Structurally and functionally normal echocardiogram. No structural cardiac abnormality identified to explain the hypotension noted on 01/22/2026.

Interpreted by: Andrea Vasquez, MD — Pediatric Cardiology

Reported: 02/06/2026
