PRIOR HOSPITALIZATION SUMMARIES

Patient: Marcus D. Whitfield MRN: PED-2025-04471

DOB: 03/03/2016 Sex: Male

Report Type: Historical discharge summary compilation

HOSPITALIZATION #1 — April 2022 (Age 6)

Dates: 04/12/2022 to 04/16/2022 (4 days) Attending: R. Dominguez, MD

Diagnosis: Acute severe asthma exacerbation with respiratory failure requiring endotracheal intubation and mechanical ventilation. First lifetime intubation.

Course: Marcus presented with acute respiratory distress following URI symptoms. Failed aggressive bronchodilator therapy in the ED and was intubated. PICU stay 2 days. Extubated on day 3, discharged on day 4 with stepped-up controller therapy. No sleep study ordered during this admission.

HOSPITALIZATION #2 — November 2023 (Age 7)

Dates: 11/08/2023 to 11/14/2023 (6 days) Attending: S. Yoon, MD

Diagnosis: Acute severe asthma exacerbation with respiratory failure requiring endotracheal intubation and mechanical ventilation. Second lifetime intubation.

Course: Marcus presented with progressive respiratory distress over 24 hours. Intubated in the ED. PICU stay 3 days with prolonged weaning. Post-extubation behavioral dysregulation requiring one-on-one observation. Social work consulted given foster care status and caregiver concerns. No sleep study ordered.

HOSPITALIZATION #3 — June 2024 (Age 8)

Dates: 06/18/2024 to 06/23/2024 (5 days) Attending: H. Collins, MD

Diagnosis: Acute severe asthma exacerbation with respiratory failure requiring endotracheal intubation and mechanical ventilation. Third lifetime intubation.

Course: Similar presentation to prior episodes. Intubated in the ED after failure of aggressive bronchodilator therapy including IV magnesium. PICU stay 2 days. Transition to ward on day 3. Discharged on day 5. Post-extubation course notable for nocturnal oxygen desaturation events (SpO2 dipping to 90-91% during sleep on days 3-4, attributed to residual bronchospasm). No sleep study ordered. No further evaluation of nocturnal desaturations performed.
