

D16 — MICU Progress Note

Dr. E. Park, MICU Fellow | MICU | 02/24/2026 07:00

Patient: Pemberton, Harold J. **MRN:** 847-29-3156 **DOB:** 04/12/1951 **Allergies:** Sulfa drugs (rash)

MICU PROGRESS NOTE

Patient: Harold J. Pemberton | MRN: 847-29-3156
Date: 02/24/2026 07:00 | ICU Day 3 | Provider: Dr. E. Park, MICU Fellow

OVERNIGHT: Uneventful. No melena or hematemesis. Tolerating clear liquids.

VITALS: HR 78, BP 112/66, RR 14, SpO2 96% on 1L NC
LABS (AM):
Na 136 | K 4.4 | Cl 102 | CO2 26 | BUN 42 | Cr 2.0 (↓ trending down) | Glucose 280
Hgb 8.4 (stable) | Plt 185

ASSESSMENT & PLAN:

- GI hemorrhage — no re-bleeding x 48 hours. Hgb stable. Transition pantoprazole: IV drip → PO pantoprazole 40 mg BID. Advance diet to regular.
- AKI — Cr 2.0, down from peak 2.3. Trending in right direction. Continue monitoring.
- K+ 4.4 — normalized from 5.2.
- COPD — prednisone continued (30 mg today per taper).
- All holds continue per yesterday's plan. Will reassess medication restarts as renal function continues to improve.
- If clinically stable tomorrow, will plan transfer back to medicine floor.

NOTE: Overnight covering resident placed an order for KCl 20 mEq PO daily (saw K+ 4.4 on PM labs, noted prior KCl order that had been discontinued, and restarted). Will review in AM — K+ currently 4.4 which does not require supplementation given AKI and planned medication restarts.
