

D22 — IR Follow-Up Note

Dr. F. Alvarez, Interventional Radiology | Interventional Radiology | 02/27/2026 08:00

Patient: Pemberton, Harold J.**MRN:** 847-29-3156**DOB:** 04/12/1951**Allergies:** Sulfa drugs (rash)

INTERVENTIONAL RADIOLOGY FOLLOW-UP NOTE

Patient: Harold J. Pemberton | MRN: 847-29-3156
Date: 02/27/2026 08:00 | Provider: Dr. F. Alvarez, Interventional Radiology

POST-EMBOLIZATION DAY 5 ASSESSMENT:
No evidence of re-bleeding. Hgb stable at 8.4 (from 8.5 yesterday – within lab variation). No melena, no hematemesis. Femoral access site healing well, no hematoma, pedal pulses intact.

RECOMMENDATION:
Patient has completed 5-day anticoagulation hold per our post-embolization protocol. No contraindication to restarting anticoagulation from an IR standpoint. May restart anticoagulation per cardiology discretion.

Follow-up: Outpatient IR clinic in 4 weeks for follow-up imaging if clinically indicated.

Electronically signed by: Dr. F. Alvarez, MD
