

D5 — Medicine Progress Note

Dr. J. Martinez, PGY-1 | Medicine | 02/19/2026 08:15

Patient: Pemberton, Harold J. **MRN:** 847-29-3156 **DOB:** 04/12/1951 **Allergies:** Sulfa drugs (rash)

MEDICINE PROGRESS NOTE

Patient: Harold J. Pemberton | MRN: 847-29-3156

Date: 02/19/2026 08:15 | HD #2 | Provider: Dr. J. Martinez, PGY-1

SUBJECTIVE: Patient reports improved breathing. Cough still productive but less frequent. Reports mild orthopnea overnight – "needed two pillows." Notes bilateral ankle swelling appears slightly worse. Weight up 3 kg from admission (85 kg today vs 82 kg admission).

VITALS: HR 88, BP 138/76, RR 18, SpO2 93% on 1L NC, Wt 85 kg (+3 kg)

LABS (AM):

Na 134 | K 3.9 | Cl 100 | CO2 27 | BUN 30 | Cr 1.5 | Glucose 278 (↑↑ – steroid effect)

WBC 11.8 | Hgb 11.0 | Plt 205

PHYSICAL EXAM:

Lungs: Wheezing improved. Now hearing bibasilar crackles (new).

CV: Irregularly irregular. On closer exam today – possible S3 gallop. JVP appears elevated at ~10 cm.

Ext: Bilateral LE edema now 2+ (was 1+ on admission)

ASSESSMENT & PLAN:

1. COPD exacerbation – improving per respiratory symptoms. Wheezing decreased. Continue current nebulizer schedule. Azithromycin Day 2 of 5.

2. CHF – CONCERN FOR DEVELOPING ACUTE EXACERBATION

- Patient is NOT improving as expected for isolated COPD exacerbation
- New orthopnea, weight gain +3 kg new bibasilar crackles, JVP elevated, LE edema worsening
- BNP was 480 on admission – repeating today
- ** BNP RESULT (returned PM): 2,400 ** (5x increase from admission)
- Ordering STAT echocardiogram for AM Day 3
- Will discuss with cardiology for formal consult
- Likely contributing factors: 1L NS bolus in ED + IV corticosteroids → fluid retention in patient with EF 30%

3. Steroid-induced hyperglycemia – glucose 278 this AM
 - Start insulin sliding scale (lispro) QAC and QHS
 - Continue glipizide 5 mg BID
 - Monitor fingerstick glucose closely
4. Depression management
 - Psychiatry consulted given sertraline was discontinued yesterday
 - [See Psychiatry Consult Note]
5. All other issues – stable. Continue current management.
