Patient: Pemberton, Harold J.**MRN:** 847-29-3156**DOB:** 04/12/1951**Allergies:** Sulfa drugs (rash)

MEDICINE PROGRESS NOTE — EVENING

Patient: Harold J. Pemberton | MRN: 847-29-3156
Date: 02/20/2026 20:45 | HD #3 | Provider: Dr. T. Singh, PGY-1 (covering overnight)

Brief update: Patient comfortable this evening. Started on IV furosemide 80 mg BID per cardiology. Prednisone 40 mg PO initiated (transitioned from IV methylprednisolone). Diuresing well — net negative 1.5L today. Breathing improved.

Constipation noted — patient has not had BM in 3 days. Likely due to reduced mobility + steroids. Changed senna from PRN to scheduled QHS. Added polyethylene glycol (MiraLAX) 17 g PO daily.

Continue current plan. Resume PRN home medications for comfort.

Electronically signed by: Dr. T. Singh, MD (PGY-1)
