

PULMONARY FUNCTION LABORATORY
SPIROMETRY REPORT

Patient: CADUCEUS, Opus J.	DOB: 14 Mar 1957	Age: 68	MRN: 004-7703
Sex: Male	Race: Black/AA	Ht: 178 cm	Wt: 91 kg BMI: 31.0
Ref. Provider: A. Medicina, MD, MPH	Indication: Occupational/disability eval — baseline lung fxn		
Study Date: 23 Dec 2024	Technician: R. Okonkwo, RRT	Accession: PF-2024-00741	

SPIROMETRY — Pre- and Post-Bronchodilator (Albuterol 2.5mg neb)

Parameter	Predicted Pre-BD	Actual Pre-BD	% Pred	Actual Post-BD	% Pred	Change %
FVC (L)	4.28	3.25	76%	3.29	77%	+1.2%
FEV1 (L)	3.31	2.57	78%	2.60	79%	+1.2%
FEV1/FVC	≥0.70	0.79	—	0.79	—	—
FEF 25-75% (L/s)	3.54	3.12	88%	3.15	89%	+1.0%
PEF (L/s)	8.62	7.90	92%	7.95	92%	+0.6%
FET (s)	—	6.8	—	6.9	—	—

Reference values: GLI-2012 (Global Lung Function Initiative). Bronchodilator response: positive if ΔFEV1 or ΔFVC ≥12% AND ≥200 mL above pre-BD value.

Pre-BD bronchodilator response: ΔFEV1 = +0.03 L (+1.2%) — **negative response** (does not meet ATS/ERS reversibility criteria).

LUNG VOLUMES — Body Plethysmography

Parameter	Predicted	Actual	% Pred
TLC (L)	7.12	5.56	78%
RV (L)	2.84	2.31	81%
FRC (L)	4.18	3.52	84%
RV/TLC (%)	40%	42%	—

TLC reduced (78% predicted) — confirms restriction. No air trapping. RV/TLC normal.

DIFFUSING CAPACITY (DLCO — Single Breath)

Parameter	Predicted	Actual	% Pred
DLCO (mL/min/mmHg)	28.4	26.1	92%
DLCO/VA (KCO)	4.52	4.44	98%

DLCO within normal limits. KCO normal. No evidence of significant alveolar-capillary membrane impairment.

Technical quality: Grade A (ATS/ERS 2019 acceptability and reproducibility criteria met; ≥3 acceptable maneuvers, two best FVC within 150 mL).
